

JavaScript WebRTC Developer – Hubl.in

Implementation of a collaborative text editor

LINAGORA offers a video-conferencing solution totally free for several months. This system relies on peer 2 peer technology WebRTC included in all modern browsers. Within this platform, we began to implement a rich text editor, with which we can work collaboratively on a text. We are looking for a trainee who gets the work and take the product to a level of professional quality.

Your tasks will be:

- Participate in community development of synchronization framework of YJS data in order to add features
- Participate in community development of Hubl.in in order to implement the collaborative editor
- Add features: cloud storage, versioning, etc.

Your skills:

- You are familiar with the JavaScript language
- You are interested in technology and peer 2 peer problematic
- You know the control system of versions Git
- You are curious and have an interest in new technologies

Your benefits:

- Nice atmosphere in a pleasant office in Hanoi
- Encouraged personal projects (conferences, entertainment communities...)
- Supervision by experienced developers
